

ICPerMed Working Groups

The ICPerMed Working Groups consist of ICPerMed members and external experts, working on topics prioritized by ICPerMed, (co-)organizing events and developing strategic documents.

The main objectives of the Working Groups are:

- contributing to the development of ICPerMed recommendations/strategic publications/reports and to ICPerMed dissemination activities (e.g. roadmap/Scientific Research and Innovation Agenda)
- providing content-driven input for ICPerMed events
- exchanging with stakeholders and representing ICPerMed in thematically focused events to improve the visibility and impact of ICPerMed in the respective community
- identifying and validating Best Practise PM examples

There are currently five Working Groups addressing five dedicated topics:

1. Clinical Studies in Personalised Medicine
2. Personalised Medicine in healthcare
3. Patients' empowerment
4. Education & Curricula in Personalised Medicine
5. Health economic value of Personalised Medicine

The Working Groups report regularly to the Executive Committee. Their results give input for the State-of-the-Art report and for organising ICPerMed events. Each Working Group is chaired by a Working Group lead and supported by a Working Group co-lead, who were chosen from and elected by the Executive Committee. In addition, the ICPerMed Secretariat supports with content-driven input, logistics and organisation.
