

## ICPerMed Working Group 3 - Patient Empowerment in Personalised Medicine

### Our Focus

**Introducing patient empowerment (PE) as key element for personalised medicine (PM) implementation. Fostering patient involvement and engagement in PM research and policy making**

### Our Aims

Exchanging best practices for patients' involvement in PM

Collaborating with all WGs to ensure that patients' perspectives are included in all PM aspects

Building awareness and engaging with different stakeholders, especially policy makers and PAO

Supporting the uptake of new approaches of patient involvement into the existing PM research environment

Understanding patients' expectations and how to better support patient involvement in PM

Promoting the integration of patient perspectives in PM research to strengthen a permanent participation and increase the societal impact

### Our Activities

Promoting existing patient engagement policies and analysing new initiatives

Collaborating with experts, including patient representatives, to co-create solutions for patient engagement challenges

Developing a policy paper regarding the integration of patient perspectives into PM approaches

Collecting both national and international best practices. Collecting and reviewing the existing policies, initiatives and strategic documents as well as recommendations for a better integration of patients in PM, from research to clinical practice

Providing support and scientific inputs to ICPerMed events
